

## Selection Exercises - Switch

1. Create a program called *Season* using a switch construct that obtains a number representing a month (January = 1, December = 12) and outputs what season the month is in. For the purpose of this program, December-March is considered winter, April-May is considered spring, June-August is considered summer, and September-November is considered autumn.
2. Create a program called *IsVowel* using a switch construct that obtains a character from the user and outputs if the character is a vowel or a consonant.
