Dirty Thirty: Pollution Report

Although pollution is a pressing issue for every country, nowhere is it more alarming than in the developing countries. As these countries strive for modernity environmental impacts are thrown to the waste side. The Blacksmith Institute founded in 1999 has made it their mission to bring these heavy polluting countries and cities to the forefront of the media by annually ranking the top 30 dirty cities. Their goal is to encourage and support local leaders of these dirty cities to become cleaner and get their names off the list.

Your job is to report on one of the top ten cities named on this year’s list. The list can be found at http://www.worstpolluted.org/ once you choose your city you will be expected to create a report that includes all of the following components found on the checklist below. The length of the report is 2 pages 12pt font.

Checklist

- Background information to the city i.e. location, population, brief history of the city.
- Information on the potential health impacts and where the major causes of pollution are coming from.
- Solutions on how your city can improve its ranking or how to get off the list.
- Visuals to enhance the report in the form of Graphs/Maps/Tables/Charts etc…
- Title page with Name/Date/Chosen City/Teacher Name/Due Date
- Reference page following APA style citing all sources used
- At least 2 other resources used on the report

Due Date:
To be Determined
