The Dufferin-Peel Wi-Fi system has the capability for Staff and Students to use their personal devices to access the internet via the dpwifi system. Please follow the steps listed below:

1. Turn-on your WiFi and select "dpwifi"
2. You will then be prompted to enter in a username and password, which is your Dufferin-Peel username and password.
3. Install/trust the certificate
4. Click OK, Connect, Join, etc. (varies by device)

**REMEMBER:** When changing your DPCDSB password, please remember to update the password on your device as well.

**Note:** Those using devices that were registered with the old wifi will need to remove the old profile and certificate before using the new setup.

**Android:** Go to Settings, select Security and tap on "Clear Credentials"

**iPhone and iPad:** Open Settings, select General, scroll down to Profiles and delete the two items (DBCDSB ClearPass and Device Enrollment)

**Mac OS:** Open System Preferences, go to Profiles and select the "DPCDSB" profile and delete it. To do this, highlight and press the "Delete" button on your keyboard

**Windows:** Find your wireless network (change/manage) settings and "forget" DPWifi from the network list
